Abraham Diress

New York, NY (Open to Relocation) | +1 (929) 408-4037 | abraham.diress.codes@gmail.com | Linkedin | Github

EDUCATION

Fordham University, New York, NY **Expected graduation: May 2028**

- **Area of Study**: Master of Science, Data Science; Interest Areas**:** Data Mining, Machine Learning, Algorithms

African Leadership University (ALU), Kigali, Rwanda **Jan 2021 - Jun 2024**

- **Area of Study**: Bachelor of Science (Hons) Computer Science
- **GPA**: 4.47 / 5.00 (Summa Cum Laude)
- **Awards:** Full Merit Scholarship
- **Relevant Coursework**: OOP, Website Development, Mobile App Development, Cloud Computing

SKILLS

Programming Languages: Python, TypeScript, JavaScript, Java, C#, SQL - All professional proficiency or above

Frameworks & Technologies: LLMs, RAG, Agentic AI, MCP, LangGraph, PyTorch, FastAPI, Node.js, Docker, AWS

WORK EXPERIENCE

Fordham University, New York, NY **Aug 2026 – Present**

Research Assistant

- Built an automated Bash framework to orchestrate unattended reboots and GRUB-level kernel reconfiguration across CloudLab and Chameleon testbeds, sustaining continuous data collection over multi-week runs.
- Benchmarked the performance cost of 15+ CPU security mitigations (Spectre, Meltdown, Retbleed) across 20+ kernel boot configurations on government-grade hardware.
- Integrated the SPEC CPU 2017/2026 benchmark suite into an automated cycling pipeline, producing reproducible performance measurements across mitigation states.
- Engineered a systemd service with persistent state management to coordinate multi-stage experiments through repeated reboots, automating log collection, compression, and secure transfer to GitHub.

Turing Inc, Palo Alto, California (Remote) **Oct 2023 – Feb 2026**

Software Engineer

- Collaborated with a 10+ person team to build a data labeling platform in TypeScript that over 1,000 labelers used across projects for Apple, Mistral AI, and ServiceNow.
- Cut manual review time by 80% by building a Python tool that checks LLM function calling datasets for tool selection, parameter correctness, and output quality.
- Set up MCP servers and backend APIs in FastAPI on GCP so AI agents could reach internal evaluation tools through one shared interface.
- Lowered LLM inference costs by 35% through prompt tuning and caching, and improved database query speed by 50% with indexing.

Africa to Silicon Valley, Addis Ababa, Ethiopia **Dec 2021 – Oct 2023**

Software Engineer, Intern

- Developed advanced skills in data structures, algorithms, and systems design through intensive coaching and real-world application in A2SV's program.
- Built an applicant management platform in C# and .NET Core that cut application processing time by 60%.
- Raised automated test coverage from 45% to 80% by adding validation and unit tests with Shouldly and Moq.
- Set up Docker and CI/CD pipelines on AWS, which cut deployment time by 60% and made releases more reliable.

SIDE PROJECTS

ramhub - Python (FastAPI), PostgreSQL, Next.js, TypeScript **Aug 2026 – Present**

- International students at Fordham had no central place for course guidance, paperwork deadlines, or the right contacts. I built RamHub to fix that, and also with drag-and-drop task boards and a calendar layered on top, students can track their own deadlines too.

DocIntel - LangGraph, Qdrant, Docker **June 2026 – Aug 2026**

- Created a RAG platform for querying technical documents using LangGraph agents, hybrid retrieval, and Qdrant. Integrated guardrails, response evaluation, and observability with RAGAS and LangSmith.

INCLUDE Benchmark Research - beautifulsoup, LaTex **Aug 2024 – Nov 2024**

- Contributed to INCLUDE, an multilingual LLM benchmark covering 44 underrepresented languages, by building data extraction workflows with Beautiful Soup, preparing evaluation datasets, and supporting automated evaluation pipelines; accepted at ICLR 2025 (32% acceptance rate).
